QNut Package Installation

Before installing the package you must install the Peanut distribution for your chosen CMS. A theme that support Bootstrap is required for QNut.

[references here]

To install package, copy the 'qnut' folder in the zip file to the Peanut Packages directory located under your CMS root directory.

- WordPress: packages/knockout_view/pnut/packages
- Drupal 8: modules/twoquakers/peanut/pnut/packages
- Concrete5: packages/knockout_view/pnut/packages

Now you can get started adding QNut features to your site. See [reference here]
