QNut Package Installation

Before installing the package you must install the Peanut distribution for your chosen CMS. A theme that support Bootstrap is required for QNut.

[references here]

To install package, copy all files and directories under the 'peanut-files' folder in the zip file to the Peanut root directory located under your CMS root directory.

- WordPress: wp-content/plugins/peanut
- Drupal 8: modules/twoquakers/peanut
- Concrete5: packages/knockout_view

Now you can get started adding QNut features to your site. See [reference here]
